**TeleAlarm, LLC. Adds New Layer of Protection by Acquiring SafetyCare™**

*Through SafetyCare, TeleAlarm, LLC Enhances Life Safety Services to its Customers*

**READING, P.A. – April 11, 2007** – TeleAlarm, LLC, provider of emergency response systems for five decades, is further enhancing its services through the acquisition of the SafetyCare monitoring center, company officials announced today.

“We are pleased to be acquiring the assets of SafetyCare, as it is only one of a few companies globally incorporating life-safety monitoring with other health and wellness services,” said Mike Bodnar, a TeleAlarm executive who has been named general manager of SafetyCare, based in Reading, Pa.

Along with processing emergency signals from its existing line of wireless emergency call systems, TeleAlarm is now staffed with dedicated first responders who have been tasked with providing a higher level of monitoring service and care to seniors and individuals with special needs. SafetyCare monitoring professionals are experienced in handling a myriad of emergency situations and safeguarding the welfare of customers.

TeleAlarm, known as an industry leader in the marketing and servicing of wireless emergency call systems, can now offer its customers immediate access to professionals in time of a health crisis or other critical incident. SafetyCare services will provide an impressive layer of added protection to TeleAlarm customers, most of whom are elderly residents in assisted living facilities or residing at home.

TeleAlarm is known in the industry for affording its customers a full emergency call system, linked wirelessly to a main station. For people residing in assisted living facilities or at home, they simply need to press a button to alert a care provider. The wireless device, in the form of a bracelet or pendant, can also track customers in case of an emergency.

Now, with the enhanced benefit of SafetyCare, TeleAlarm provides a fully integrated emergency call system for senior care facilities with an added layer of back-up protection through the monitoring of the entire system by first responders in the company’s new central station.

“If staffing at an assisted living facility happens to be low, perhaps due to holidays, vacations or unplanned absences, SafetyCare plays an important role,” Bodnar explained. “In the rare occurrence when an emergency call for assistance is missed or not responded to by a care provider in a facility, that emergency call can be immediately routed to SafetyCare’s central station, where trained first responders can provide assistance.

“Through this important acquisition of SafetyCare, we are adding an extra layer of care and protection for all of our customers, whether they are living in an assisted living residence or at home,” he added. “It is a level of protection that others simply cannot provide.”

To underscore its greatly expanded services, TeleAlarm will change its name to SafetyCare Technologies, LLC.

Unlike other monitoring companies, SafetyCare ensures its staff has the right experience for the job. SafetyCare customers access the 24-hour-a-day system at the press of a button. Immediately, they gain voice contact with an experienced first responder at SafetyCare headquarters. The highly trained team includes emergency medical technicians, police, fire and emergency dispatchers, all of whom have years of experience working with people in need.

In preparation for the acquisition, TeleAlarm has undertaken a \$2 million renovation of an 8,000-square-foot facility in Reading, Pa., making it possible to accommodate the enhanced SafetyCare technology and manpower.

TeleAlarm will price SafetyCare services at a level relative to the current market, which offers far less services, rendering the competition virtually obsolete. For more information, please log on to [www.SafetyCare.us](http://www.SafetyCare.us)
