SafetyCare™ Receives UL Listing

Security and Safety Company Meets and Exceeds UL Requirements

READING, PA. – November 13, 2007 - SafetyCare™ is pleased to announce it has received confirmation and is now an Underwriters Laboratories Listed Central Station. Underwriters Laboratories (UL) is a non-profit public safety testing agency that serves as the benchmark for insurance companies and inspects and lists alarm monitoring facilities in North America.

As a UUFX UL Listed Central Station, SafetyCare is authorized to monitor UL residential and commercial burglary and fire alarm systems. SafetyCare received listings for both central station operation and site automation systems.

“We are pleased that the infrastructure we have built exceeds the requirements set forth by Underwriters Laboratories,” said Mike Bodnar, General Manager, SafetyCare. “UL certification is essential in attaining insurance for certain client types. SafetyCare underwent vigorous testing for this certification, exceeding a wide range of requirements, including analysis of the construction of our national Response Center, our equipment, our security systems, our employee training and our internal procedures.”

With the UL certification, SafetyCare can undertake UL-listed jobs in such high-risk places as jewelry stores, government buildings, military installations and banks. Tom Kwasnik, Manager of the SafetyCare Response Center, noted the UL designation will be of great benefit to SafetyCare’s dealers as this listing allows them to offer monitoring service for virtually any residential and commercial customer.

SafetyCare maintains a complete record of all alarms and responses to comply with UL requirements. All equipment used throughout SafetyCare, including the computer network, is now UL certified.

“Like any truly professional organization, SafetyCare is always striving to upgrade its service with the latest technological advances, continuous staff training and ongoing sales and technical support for its customers,” Bodnar said. “We are pleased that our efforts and diligence was recognized by UL and documented through our listings. The UL Certification further demonstrates our commitment to providing the highest quality two-way voice medical alert monitoring services for our dealers and their customers.”

SafetyCare (www.SafetyCare.net) is the next generation in safety and security monitoring, leveraging evolving technologies to bring new products to market. Unlike its competitors, SafetyCare is staffed by Life & Safety Emergency Medical Technicians who have the experience to handle a myriad of emergency situations and safeguard the welfare of customers. Besides providing 24-hour safety and security monitoring for homes and businesses, SafetyCare handles emergency signals from wireless emergency call systems installed at assisted living facilities, school and campus buildings, hospitals and other facilities.
